

Security, Data Integrity, & Back-up Plans for adilas.biz

"all data is live and searchable"

Security, integrity, and back-up plans are hot topics in today's world. We, at adilas.biz, take security, data integrity, and back-ups very seriously. Over 75% of the adilas.biz online application deals with error handling, validation, and security related topics. This one page flyer is just the tip of the iceberg when it comes to how we play in the digital cyber game of today's world. For more information, please see section 2.1 of our "Steps To Success" (online user guide) at:

https://www.adilas.biz/top_secret/steps_to_success.cfm

Security Features:

- SSL (secure socket layer) & https used on every page connection
- Commercially hosted environment – we use third party commercial hosting companies
- Firewalls, virus protection, 24/7 tech support personnel monitoring servers
- Multi layered security wrappers – networks, servers, corporations, users, pages, settings & permissions
- Over 100+ user permissions – checked on every page request
- Over 100+ application settings – checked on every page request
- 3-way check for user to permission to corporation on every page request
- Secure login – "3 strikes – you're out!" policy on failed login attempts
- Privacy, data encryption, & built-in system history and full audit trail

Data Integrity:

- IP address tracking for all user logins & digital user timecards
- Server-side validation on every page
- Special validation routines to check for "cross-site scripting or XSS" – hack attempts
- Multiple servers & strategic use of remote web services
- Dynamic template based system – code once, use many
- Human readable error messages
- Export data to Microsoft Excel or Adobe PDF at any time – control your own back-ups

Back-up Plans:

- We maintain a 2 week revolving back-up of all data and files
- Commercially hosted daily back-ups of code, files, images, and database files
- Off-site storage of back-up files
- It's your data... How do you want it? Web, html, spreadsheet, PDF, disk, screen shots, etc.
- We allow exports of data to empower you to help control your own back-ups
